#### FOUR-POINT ROLLER SUPPORT SYSTEM (STANDARD)

Dryers are designed with a four-point roller support system, eliminating costly repairs and downtime due to trunnion failures.

### SINGLE PHASE REVERSING (STANDARD)

Single Phase Reversing is a standard feature on these dryers. What once was an expensive option requiring an upgrade from single phase to three-phase electrical service is now available in single phase. A reversing tumbler ensures that the load doesn't "rope" or "ball up", providing a quicker, more even drying process.

### **RESIDUAL MOISTURE CONTROL (STANDARD)**

These dryers utilize a unique Residual Moisture Control (RMC) sensing system to measure the presence of moisture in the load. The patented system senses when the load is dry, shutting the unit down to prevent overdrying. This saves time and utility costs as well as prolongs the life of dried items.
